RADS Physics provides medical physics services to radiation oncology departments across the US through contract and full-time staff and in partnership with other medical physics companies. We are hiring for an experienced medical physicist to provide clinical medical physics services in a full-time capacity in the department of radiation oncology for a brand-new cancer center in Naples FL. The selected candidate will lead a team of 2 medical physicists and 2 dosimetrists in a technologically progressive department.

Job Responsibilities:

- 1) Ensuring compliance with regulatory requirements and best practice recommendations in radiation oncology
- 2) Linac calibration, quality assurance, and maintenance of all equipment in radiation oncology
- 3) Treatment planning review and approval
- 4) Implementation of new technology including acceptance, commissioning, process development, and training,
- 5) Support and assist physicians, dosimetrists, therapists, and other colleagues. Implement requested improvements and changes facilitating their work.
- 6) Qualified for the independent practice of radiation oncology physics in the following special procedures including 3D/VMAT/IMRT/SRS/SRT/SBRT

Technologies/Machines:

Varian True Beam Edge, Varian TrueBeam, Varian Halcyon, Eclipse, Aria, Velocity, Mobius, Siemens Somatom, Philips Brilliance Big Bore.

Scheduled Days /Hours: Monday through Friday;

Education:

MS/PhD in medical physics or related field

Experience:

2-3 years post-residency in Therapeutic Medical Physics preferred

Required License/Certifications:

ABR/ABMP/CCPM-certified preferred.
